

English Tuesday 30th
June- Friday -3rd July

<https://vimeo.com/channels/theplanets> *

The Planets 12 different planets each with its own unique atmosphere and inhabitants.

- Planet 1 – Tribal Discovery. Filled with ‘cute’ aliens this planet would soon become annoying.

Planet 2 – Endless repetition – a planet where all the inhabitants live the daily grind perpetually.

Planet 3 – All is calm, but maybe we are being lulled into a false sense of security? The aliens start to eject from the pipes, as they land with a plop they grow into beautiful flowers.

Planet 4 – Danger Lever high, technological takeover on planet 4. Robots inhabit this alien. They seem really happy and loving.

Planet 5 – Underwater evolution discovered. Millions of tiny amoeba like creatures are multiplying under the sea. Their photoluminescence creates an interesting landscape.

Planet 6 – Volatile – the aliens on this planet just can’t agree.

- 
- Planet 7 – Utopian Disturbance. Cloven animals wandering around a bit and eating grass, maybe the most boring of the planets.

Planet 8 – inedible danger – where the vegetation bites back!

Planet 9 – Reckless – retro game characters live on planet 9 – superheroes who love to show off their ‘super’ powers.

Planet 10 – Missing, undiscovered. The scariest inhabitants of any planet. Dead aliens

Planet 11 – Avoid – The aliens on this planet are crazed. They run and run and run, just for the fun of it.

Planet 12 – Home – under attack. The aliens here seem resigned to the end. So resigned they have decided to put it into a song.

Watch the
video

Tuesday 30th July and Wednesday 1st July
Write descriptions of the alien life forms.

As you watch the video pause after each planet and write a detailed description of the alien life form.

Your description should enable someone to build the picture of what you see when you land on the planets. You are building a picture in their mind...

Examples

- They were more like shadows than physical beings - lightly resembling humans-shape wise, but only black smoke. Each form rippled whenever it moved like disturbed water. The only way I knew they were looking at me was the white eyes with a slight blue hue that stood out against the darkness.
- The alien's skin was like bark and it had many green and purple spines on the back that could have been photosynthetic. From it's head and limbs it seemed to emit a bioluminescent glow. It was bipedal like a human but it had four arm-like projections, two which seemed to function as hands and two which seemed to spark like they were overflowing with static electricity.

Thursday 2nd July

Decide on and write a set of rules for the argumentative aliens on planet 6.

Friday 3rd July

Design and describe your own alien. It has to live and be adapted to one of the planets in our solar system. Create an informative presentation.

DESIGN YOUR ALIEN

Thick shield

Protect against sand
Protect against cosmic radiation
Heat reflecting shield

Alien can crawl up in his own shield to protect itself from the storms and radiations

Mars used to have liquid water

The alien may have developed fins to swim

Shield to protect eyes from UV rays

Thin atmosphere

Big nostrils to suck in more air at one time

Long extendable eyes to see through sand storms

Weak gravity

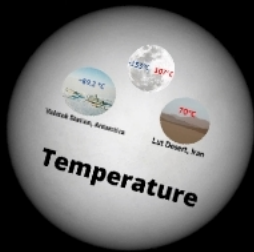

Feet like sucker knobs to stick the ground

Make sure you think about the conditions on each planet and provide suitable physical features to deal with:

- a way to breathe
a food source
from heat and/or cold
protection from cosmic radiation
a way to sense their environment
a way to move (based on strong/weak gravity)

Design Your Alien

Strong Gravity

Main Character?

advance
or
Primitive?
